About MATH5835

1 Introduction to Statistical Computing

- 1.1 What is statistical computing?
- 1.2 Probability and statistics background
- 1.3 R programming

Part I Monte Carlo estimation

2 Introduction to Monte Carlo

2.1 Example: estimating the expection

2.2 Example: Estimating with a tin-can and a box

2.3 Monte Carlo estimator

3 Monte Carlo examples

- 3.1 Example of Monte Carlo estimation
- 3.2 Monte Carlo estimation of probabilities
- 3.3 Monte Carlo estimation of integrals

4 Monte Carlo error

4.1 Reminder: bias and error

4.2 Reminder: limit theorems

4.3 Bias and error of the Monte Carlo estimator

5 Importance sampling I

- 5.1 Variance reduction
- 5.2 Rejection
- 5.3 Importance sampling: definition

6 Importance sampling II

- 6.1 Error of importance sampling
- 6.2 Importance sampling: example
- 6.3 Picking a good distribution

Problem Sheet 1

7 Antithetic variables I

- 7.1 Estimation with correlation
- 7.2 Estimation with antithetic variables
- 7.3 Estimating again

8 Antithetic variables II

- 8.1 Error with antithetic variables
- 8.2 Antithetic variables: example
- 8.3 Finding antithetic variables

9 Control variates

Part II Random number generation

10 Generating random numbers

11 LCGs

Problem Sheet 2

12 Uniform and discrete generation

13 Inverse transform method

14 Rejection sampling

15 Envelope rejection sampling I

16 Envelope rejection sampling II

Problem Sheet 3

Part III

MCMC

17 Introduction to Markov chains

18 Long-run behaviour of Markov chains

19 Markov chains in continuous space

20 Metropolis–Hastings algorithm I

21 Metropolis–Hastings algorithm I

22 Convergence and mixing

23 MCMC and Bayesian statistics

Problem Sheet 4

Part IV Bootstrap

24 Empirical distribution

25 Bootstrap estimation

26 Bootstrap error

27 Bootstrap confidence intervals

Problem Sheet 5

Part V Appendix

28 FAQ

29 Coursework
